Developer Profile

Developer Profile collects your organization's contact information, information about the data you require in Amazon Services APIs, and security and use information to ensure your compliance with Amazon's Acceptable Use Policy and Data Protection Policy. If you are an Amazon Marketplace Web Service developer with multiple developer IDs, you do not need to submit a separate Developer Profile for each developer ID.

Once you complete the Developer Profile, Amazon will evaluate your information and create a case with next steps. You may be asked to provide additional information or documentation, so please complete all fields truthfully and accurately.

Data Access

Please select the option that best describes your organization.

Note that your answers represent your organization. Need more information?

Public Developer: I build and offer publicly available applications that are used by other companies

If you are currently a developer, please provide your organization's developer ID(s).

Please include all of your organization's developer IDs separated by a comma. Note: If you are an Amazon Marketplace Web Service developer with multiple developer IDs, you do not need to submit a separate Developer Profile for each developer ID.

Example: 123456789123, 9876543210987

Roles

Roles determine access to Selling Partner APIs. Role definitions can be found here.

Note: Restricted roles contain Personally Identifiable Information (PII) about Amazon Buyers, and you will be required to provide additional information about your data use and security controls.

☒ Product Listing

Create and manage product listings, including A+ content.

☒ Pricing

Determine list prices and automate product pricing.

☒ Amazon Fulfillment

Ship to Amazon, and Amazon ships directly to customer. Includes Fulfillment by Amazon.

☐ Buyer Communication

Manage messaging to and from Amazon buyers.

☐ Buyer Solicitation

Solicit Amazon buyers for feedback.

☒ Selling Partner Insights

View information about the Amazon Selling Partner account and performance.

☒ Finance and Accounting

Produce account and financial statements. Does not include information required to generate tax invoices.

☒ Inventory and Order Tracking

Monitor and manage inventory. Does not include information required to generate shipping labels.

☐ Amazon Warehousing and Distribution

Amazon and manage Amazon shipments and inventory. Generally used for interacting with Amazon inventory information and shipment details.

☐ Brand Analytics

Access your sales and inventory data to manage your Amazon Retail business.

☐ Direct-to-Consumer Shipping (Restricted)

Generate shipping labels and ship Amazon orders directly to customers.

☐ Tax Invoicing (Restricted)

Generate tax invoices to comply with tax regulation.

☐ Tax Remittance (Restricted)

Calculate and remit sales taxes.

☐ Professional Services (Restricted)

Provide add-on services such as Report of Choice Delivery, Assembly and Installation to Amazon buyers.

Use Cases

Describe the application or feature(s) you intend to build using the functionality in the requested roles.

We are creating an integration to Google Sheets for Sellers to be able to pull their seller data in and review several unique graphs and dashboards.

Describe how your application or feature(s) will benefit authorized users.

Our application will benefit users by allowing them to see and manipulate their seller data in Google Sheets and visualize it with unique graphs and dashboards. This will allow them to make more informed decisions.

Security Controls

Do you use network controls to prevent unauthorized access to Amazon information?

☒ Yes

☐ No

Do you restrict access to Amazon information based on users' job duties or business functions?

☒ Yes

☐ No

Do you encrypt Amazon information in transit?

☒ Yes

☐ No

Do you have an incident response plan that covers monitoring, detection, and response for potential threats and security incidents?

☒ Yes

☐ No

Does your incident response plan include reporting security incidents involving Amazon information to security@amazon.com?

☒ Yes

☐ No

Are minimum password requirements established for personnel and systems?

☒ Yes

☐ No

Are credentials (passwords, encryption keys, secret access keys) stored securely? In other words, you avoid keeping credentials in public repositories, sharing credentials, or hard coding credentials into applications.

☒ Yes

☐ No

List all outside parties with whom your organization shares Amazon information and describe how your organization shares this information.

We will not share Amazon Seller information with any 3rd party organization.

List all non-Amazon MWS sources where you retrieve Amazon information.

We will only be using Amazon's SP-API to receive seller information.

☐ I have read and agree to the Amazon Services API Developer Agreement, Acceptable Use Policy, and the Data Protection Policy
